

PASSW*ORDS

Passwords are a way of keeping your personal information safer on your electronic devices and the Internet. Passwords can help prevent your personal information from being seen by others or even stolen.

AVOID OBVIOUS CHOICES
OR A REFERENCE SOMEONE ELSE COULD GUESS

**MAKE PASSWORDS EIGHT
OR MORE CHARACTERS**

USE DIFFERENT PASSWORDS

for different
websites,
accounts
and devices

CHANGE DEFAULT

OR

FACTORY PASSWORDS

Allow multi-factor
authentication
where possible

Don't share
passwords

Use automatic
lock features

Don't use the
"remember password"
feature. Automatic logins
are convenient but risky
if you share a computer

If you use a
password manager,
do your research to
find one you can trust

If you need to write
down passwords,
keep them offline
in a secure place
